LESSON PLAN FOR CBCS HONOURS

PAPER	TOPIC	SUB TOPIC	NUMBER OF LECTURES	TEACHER: NAME
DC 1: PAPER- 1: Algae and Microbiology	Algae	 General characteristics; Ecology and distribution; range of thallus organization; Cell structure 	1-4	D.S
0.500		and components; cell wall, pigment system, reserve food (of only groups represented in the	5-8	
		syllabus), flagella; methods of reproduction;	9-10	
		 Classification; criteria, system of Fritsch, and evolutionary classification of Lee (only upto groups); 	11-15	
5.		 Cyanophyta and Xanthophyta: Characteristic features, Morphology and life-cycle of Anabaena 	16-20	
-		(Asexual cycle) and Vaucheria, Ultra Structure of cell; Heterocyst and role in N2 fixation.		
		6. Chlorophyta and		
		Charophyta: Characteristic	21-24	
		features, Morphology and		
		life-cycle of		
		Chlamydomonas, Volvox,		
		Oedogonium and Chara.		
		 Phaeophyta and Rhodophyta: Characteristic features, Morphology and life-cycle of Ectocarpus and Polysiphonia. 	25-27	
×	-	 Diatom: Cell structure, Cell division, Auxospore formation in Centrales and Pennales. 	28-29	
14	- 1	9. Role of algae in the		
		environment, agriculture,		
	11.5	biotechnology and industry.:	30	
_		Biotechnology potential of		
		microalgae for SCP;		
		Production of Agar-agar, Algae as bio-fertilizer, Mass		
		cultivation of algae for bio-	17	
		diseal production.		
	Microbiology	1. Introduction to microbial	1-7	P.D

PHINCIPAL GOURMAHAVIDYALAYA Mangalbari, Malda

characteristics; Types- archaebacteria, eubacteria, wall-less forms (mycoplasma and spheroplasts); Cell structure: Flagella (ultrastructure) & Pilli; Cell wall – chemical structure and differences between Gram +ve & Gram – ve bacteria; Bacterial genome and plasmid; Endospore - formation, structure and function. 2. Bacterial reproduction: Vegetative and asexual; Genetic Recombination (a) Transformation – with special emphasis on Natural and Induced competence and DNA uptake, (b) Conjugation – F- factor, F+x F-, Hfr x F-, concept of F', chromosome mobilization, (c) Transduction- Generalised and specialized. 3. Economic importance of bacteria: Industrial Production of Vinegar and Streptomycin (brief outline); Enzyme (Amylase, Protease); Plant Growth Promoting Rhizobacteria (PGPR): Biological nitrogen fixation and nodulation process in legumes. Role of PGPR in agriculture as	8-14
process in legumes. Role of	22-27

		(general account), 5. DNA virus, (T-phage), lytic and lysogenic cycle; RNA virus (TMV). Economic importance of viruses with reference to vaccine production, role in research, medicine and diagnostics, as causal organisms of plant diseases	28-30	
DC-1: PAPER 2 (Practical)	Algae	1. Work out of algal specimens through preparation of semi- permanent slides (stained with cotton blue) and drawing of reproductive structures with proper magnification using camera lucida drawing prism.: Anabaena, Vaucheria, Volvox, Oedogonium, Chara, Ectocarpus and Polysiphonia.	1-10	D.S
	Microbiology	1. Types of Bacteria to be observed from permanent slides/photographs. Electron micrographs of bacteria, binary fission, endospore, conjugation. 2. Gram Staining (Gram +Ve and Gram -Ve), Observation of Bacteriods in root Nodule (Simple staining: Methylene blue); Endospore staining with malachite green,	1-10	P.D

		(Bacillus spp.) 3. Electron micrographs/Models of viruses – T-Phage and TMV, Line drawings/ Photographs of Lytic and Lysogenic Cycle.		
DC2: PAPER 3: Fungi, Lichens and Plant Pathology (Theory)	Fungi, Lichens	Introduction to true fungi; General characteristics; Thallus organization; Cell wall composition;; Teleomorphic and Anamorphic; Degeneration of sex in fungi; Parasexuality; Nutrition; Life Cycle Patterns. Classification (Ainsworth 1973) up to sub-division diagnostic characters and	1-10	S.S
		examples. 3. Characteristic features; Ecology and significance; Thallus organisation; Reproduction; Life cycle with reference to Rhizopus, Ascobolus, Agaricus and Penicillium.	14-22	
		4. Symbiotic associations: Lichen – Occurrence; General characteristics; Growth forms and range of thallus organization; Nature of associations of algal and fungal partners; Reproduction and ecological role in pollution monitoring; Mycorrhiza- Ectomycorrhiza, Endomycorrhiza, Phosphate mobilization by AMF. Significance and role in Agriculture.	23-25	
		5. Applied Mycology: Role of fungi in biotechnology; Application of fungi in food industry, Fungi as Biocontrol	26-28	

	agents; Mycotoxins. 6. Industrial production of Cheese, Ethanol, Baker's yeast, Amylase and Rivoflavin.	29-30	
Plant Pathology	 Introduction to plant pathology; Plant pathology in India and Global prospective; Concept of Disease in Plants and Types of Diseases. 	1-7	P.D
	 Terms and definitions: Disease concept, Symptoms, Etiology, Inoculum and Infection, Pathogenesis, SAR and ISR, Disease triangle and disease cycle, Epidemic and Endemic, Sporadic and Pandemic Disease. Koch's postulate. 	8-15	
	 Mechanism of infection (Pre- penetration, Penetration and Post-Penetration), Plant defense responses with reference to Phytoalexins and PR proteins. Signal transduction leading to SAR and ISR. 	16-20	59
	 Concept of plant disease management: IPM, Chemical, Biological and Quarantine. Concept of crop rotation. 	21-25	
	 Symptoms, Causal organism, Disease cycle and control measures of: Bacterial diseases – Citrus canker, Viral diseases – Tobacco Mosaic Disease. Fungal diseases – Late blight of potato and Black stem rust of wheat. 	26-28	
	 Worldwide development of plant pathology as a profession: Indian and International institutions of crop protection, Plant disease clinics. 	29-30	

ė.

DC2: PAPER 4 (Practical)	Fungi and Lichens	 Study of asexual stage from temporary mounts, drawing and microscopic measurement: Rhizopus, Ascobolous / Peziza and Agaricus. Study from permanent slides: Sexual stage in Rhizopus, Conidia of Penicillium, Aspergillus spp. Isolation of AMF from soil through wet sieving and decanting method and comment on the type and nature of spore. (Demonstration) Lichens: Study of growth forms of lichens (crustose, foliose and fruticose) on different substratesthrough museum specimen. 	1-10	S.S
	Plant Pathology	 Study from temporary mounts (Histopathology): Late Blight of Potato, Stem rot of Jute, Loose smut of wheat, Leaf rust of Justicia. Study from permanent slides: Uredial, Telial, Pycnidial and Aecial stages of Puccinia graminis, Herbarium specimens of bacterial diseases; Citrus Canker; Viral diseases: TMV,	1-10	P.D

DC 3: PAPER 5: Archegoniate and	Archegoniate	194	Introduction: Unifying features of archegoniates; Transition to land habit; Alternation of generations. Bryophytes: General	1-3	D.S
Paleobotany (Theory)			characteristics; Adaptations to land habit; Classification (Proskauer, 1957) up to class. Range of thallus organization. Ecological and economic importance of bryophytes with special reference to Sphagnum.	4-12	P.D
		3.	Type Studies- Bryophytes: Morphology, anatomy and reproduction and sporophyte development and alternation of generation of Marchantia, Anthoceros, Sphagnum and Funaria.	13-21	
		4. 1	Pteridophytes: General characteristics; Classification up to class (Sporne, 1975); Concept of heterospory and origin of seed habit; Apogamy, and apospory; Stelar evolution. Ecological and economic importance of pteridophytes. Early land plants Rhynia and	22-37	5.5
		5. 1 1 1 1	Lepidodendron (Reconstructed). Type Studies- Pteridophytes: Morphology, anatomy and reproduction of Psilotum, Lycopodium, Selaginella, Equisetum and Pteris Developmental details not o be included).	38-47	
		6. C u F	Gymnosperms: General characteristics, classification up to order (Stewart and Rothwell, 1993), Ecological and economic importance.	48-52	s.s
		7. V a ()	/egetative morphology,	53-55	

		8. Paleobotany: Fossil: types and modes of preservation (Schopf, 1975), conditions of preservations, fossilization process; Geological time scale and major events of plant life through geological ages.: Indian Gondwana system with major megafossil assemblages; Importance of study of fossil.	56-60	D.S
DC 3: PAPER 6 (Practical)	Bryophyte	i. Morphology of thallus and permanent slide preparations of the following ii. Marchantia: Whole mount of rhizoids& scales, vertical section Gemma cup, Antheridiophore, Archegoniophore iii. Anthoceros- Dissection of sporophyte (to show stomata, spores, pseudoelaters, columella). iv. Funaria- Whole mount of leaf, rhizoids, operculum, peristome, annulus, spores and longitudinalsection of capsule.	1-10	P.D
	Pteridophytes	i. Morphology and permanent slide preparations of the following ii. Selaginella and Lycopodium: Transverse section of stem, whole mount of strobilus, longitudinal section of strobilus. iii. Equisetum- Transverse section of internode, longitudinal section of strobilus, transverse section of strobilus, transverse section of strobilus, whole mount of sporangiophore. iv. Pteris- Transverse section of sporophyll, whole mount of spores,	1-10	5.5

Paleobotany:	 Morphological study: Ptilophyllum, Vertebraria, and Glossopteris leaf fossils Study from permanent slides: T.S. of stem of Rhynia, Lepidodendron, Calamites, Lyginopteris, Cordaites, and Medullosa, 	1-10	D.S
Gymnosperms	i. Cycas- Morphology (bulbil, leaf), whole mount of microsporophyll, whole mount of spores (temporary slides). ii. Pinus- Morphology (long and dwarf shoots, whole mount of dwarf shoot, male cones), transverse section of Needle, longitudinal section of / transverse section of male cone, whole mount of microsporophyll, whole mount of Microspores (temporary slides). v. Morphological studies of reproductive structures of Pinus (male and female cones), Cycas (Megasporophyll) Gnetum (male and female cones); Transverse section of coralloid root, leaflet anatomy, (permanent slide).	1-10	S.S

PAPER 7: Morphology	and	morphology, Palynology and	
and	Anatomy of Angiosperms	Anatomy, scope and applications in systematics,	
Anatomy of	BIversite	forensic and pharmacognosy.	
Angiosperms		Leaf: Types, Margin, Base, Venation	
(Theory)		and Phyllotaxy, Petiole and	13-24
(cory)		modifications.	
		Inflorescence: types with examples; Flower: Floral	
		parts, Thalamus and insertion	
		of floral parts, Calyx, Corolla,	25-36
		Aestivation, Perianth, floral	
		diagram and floral formula.	
		Stamen: Types and anther	
		shape. Carpel : types,	
		placentation-types, ovule	
		structure and types; Fruit types with examples.	
5.		Meristimatic and permanent	2005-0-20-0
		tissues: Organization of shoot	37-48
		apex (Tunica-corpus concept)	
	v 3	and organization of root apex	
	1	(Korper-Kappe concepts);	
		Structure of dicot and monocot leaf, Kranz anatomy.	0
		Structure of Xylem and	
		Phloem tissue; Types and	
1		evolution of stele; Vascular	
		bundle -types and function.	
		Root-Stem transition and its	
1		significance; Normal and	1
	4-	Anomalous secondary growth (citing examples of Bignonia	
J.	4	and Dracaena and Tinospora	
	-1	root), different types of wood.	1 1
		Concept and application of	
1		Dendrochronology.	()
	100	5. Adaptive and Protective	lesses I
		Systems: Epidermal tissue	49-60
	-	system, cuticle, epicuticular	
		waxes, trichomes(uni- and multicellular, glandularand	
		nonglandular, two examples	
		of each), stomata	
1		(classification); Aderustation	
		and incrustation; Anatomical	
		adaptations of xerophytes and	
		hydrophytes.	

DC 4: PAPER 8 (Practical)	Morphology and Anatomy of Angiosperms	 Morphology: Morphological studies (No working out): Different types of phyllotaxy in plants; Types of special inflorescence; Aestivations, Anther types and Placentation; Different types of fruits. Anatomy: Study of anatomical details through permanent slides/temporary stain mounts/ macerations/ museum specimens with the help of suitable examples. Apical meristem of root, shoot and vascular cambium Root: monocot, dicot, secondary growth Stem: monocot, dicot - primary and secondary growth C4 leaves (Kranz anatomy) (Temporary stain mounts and Permanent slide) Anamolous secondry growth in Bignonia and Dracaena, Tinospora root Stomata types; trichomes: non-glandular and glandular Adaptive Anatomy: Hydrophyte: Eichhornia, Hydrilla and Ludwigia adscandens. Xerophyte: Nerium and Casuarina Secretory tissues: raphids, sclerides, aleurone, lithocysts an laticifers. 	1-10	D.S
---------------------------------	---------------------------------------	---	------	-----

DC 5: PAPER	Plant	1. Significance of Plant	1-7	D.S
9: Plant	Systematics	systematics: Introduction to		
Systematics		systematics; Plant		
(Theory)		identification, Classification,		
		Nomenclature. Field	- 1	
		inventory; Functions of		
		Herbarium; Important		
		herbaria and botanical		
		gardens of the world and		
		India; Virtual herbarium; E-	4	
		flora; Documentation:	1	
		Flora, Monographs,		
		Journals; Keys: Single		
		access and Multi-access.		
		Taxonomic hierarchy:	7-14	
		Concept of taxa (family,	7-14	
		genus, species); Categories		
		and taxonomic hierarchy;		
		Species concept		
		(taxonomic, biological,		1
		evolutionary).		1
		3. Botanical nomenclature:	45.05	1
		Principles and rules (ICN); Ranks and names;	15-25	1
		Ranks and names; Typification, author		1
		citation, valid publication,		1
		rejection of names,		
		principle of priority and its		
		limitations; Names of		
		hybrids.		1
	1 1	4. Systems of classification:		
- 1		Major contributions of	1	
		Theophrastus, Bauhin,		
		Tournefort, Linnaeus,	26-33	1
		Adanson, de Candolle,		
		Bessey, Hutchinson,		
		Takhtajan and Cronquist;		
		Outline of classification		
		systems of Linnaeus (1753),		
		Bentham and Hooker (1862-1883) upto series and		
		Engler and Prantl (upto		
		series); Brief reference of		
		Angiosperm Phylogeny		
		Group (APG III)		

DC5: PAPER 10: (Practical)	Plant Systematics	Study of vegetative and floral characters of the following families (Description, V.S. flower, section of ovary, floral	1-10	D.S
		clades). Origin and evolution of angiosperms; Co-evolution of angiosperms; Methods of illustrating evolutionary relationship (phylogenetic tree, cladogram). 7. Diagnostic features of Families: Dicotyledons-Ranunculaceae, Brassicaceae, Malvaceae, Leguminosae(sensu lato), Apiaceae, Solanaceae, Lamiaceae, Cucurbitaceae, Rubiaceae, Euphorbiaceae, Asteraceae. Monocotyledons-Alismataceae, Poaceae, Zingiberaceae and Orchidaceae.	52-60	
		5. Biometrics, numerical taxonomy and cladistics: Characters; Variations; OTUs, character weighting and coding; Cluster analysis; Phenograms, cladograms (definitions and differences). 6. Phylogeny of Angiosperms: Terms and concepts (primitive and advanced, homology and analogy, parallelism and convergence, monophyly, Paraphyly, polyphyly and	48-51	

		diagram/s, floral formula/e and systematic position according to Bentham & Hooker's system of classification): Ranunculaceae- Ranunculus, Delphinium Brassicaceae- Brassica, Alyssum / Iberis Malvaceae- Sida / Abutilon Apiaceae- Coriandrum /Anethum / Foeniculum Solanaceae- Solanum /Physalis/ Nicotiana Lamiaceae- Salvia/Ocimum/ Leucas/Leonurus Cucurbitaceae: Cephalandra/ Nukia Rubiaceae: Dentella/ Spermacoce/Oldenladia Euphorbiaceae: Jatropha / Croton / Acalypha Asteraceae- Sonchus/ Launaea, Vernonia/ Ageratum/ Tridax Mounting of a properly dried and pressed specimen of at least 20-30 collected Angiospermic plants with herbarium label and arranged according to Bentham and Hookers system of classification		
DC 6: PAPER 11: Plant Ecology , Phytogeogra phy and Biodiversity (Theory)	Plant Ecology	1. Introduction : Basic concepts; Levels of organization. Interrelationships between the living world and the environment, the components and dynamism, homeostasis. 2. Soil: Importance; Origin; Formation; Composition; Physical; Chemical and Biological components; Soil profile; Role of climate in soil development. Water: Importance; States of water in the environment;	9-16	P.D

+

		Vegetation.		
	Plant Biodiversity	1. Biodiversity — definition, scope, types (genetic, species and ecosystem), importance and threats; Threatened plants (IUCN Categories); knowledge on Red Data Book; Hotspots. 2. In situ and ex situ conservation strategies for rare and endangered plants with emphasis on National parks, Sanctuaries and Biosphere reserves, seed banks, cryopreservation in India.	56-60	P.D
DC 6: PAPER 12: Practical	Plant Ecology and Phytogeogr aphy	Determination of pH of various soil and water samples (pH meter, universal indicator/Lovibondcomparator and pH paper) 1. Determination of organic matter of different soil samples by Walkley & Black rapid titration method. 2. Determination of dissolved oxygen and dissolved carbon dioxide of water samples from polluted andunpolluted sources. 3. Comparison of bulk density, porosity and rate of infiltration of water in soils of three habitats. 4. Study of morphological adaptations of hydrophytes and xerophytes (four each). a. Hydrophyte: Eichhornia, Nymphaea, Hydrilla, Pistia, Ludwigla adscandens. b. Xerophyte: Nerium, Casuarina, Opuntia, Euphorbia tirucauli.	1-10	P.D

		herbaceous vegetation in the college campus, byspecies area curve method (species to be listed). 6. Quantitative analysis of herbaceous vegetation in the college campus for frequency and comparison with Raunkiaer's frequency distribution law. 7. Quantitative analysis of herbaceous vegetation for density and abundance in the college campus.		
DC 7. PAPER 13: Economic botany (Theory)	Economic botany	1. Origin of Cultivated Plants: Concept of Centres of Origin, their importance with reference to Vavilov's work. Examples of major plant introductions; Crop domestication and loss of genetic diversity; evolution of new crops/varieties, importance of germplasm diversity.	1-10	s.s
		Cereals: Wheat and Rice (origin, morphology, processing & uses); Brief account of millets.	11-18	
		3. Legumes: Origin,	19-27	
		morphology and uses of		
		Chick pea, Pigeon pea and		
		fodder legumes.		
		Importance toman and		
		ecosystem.		1
		4. Sources of sugars and	28-36	
		starches: Morphology and	20-30	
		processing of sugarcane,		
		products and by-products of		
		sugarcane industry. Potato -		
		morphology, propagation &		
		marpharold, propagation of		

*:

	5. Spices: Listing of	
	important spices, their	37-42
	family and part used.	
	Economic importance	
	with specialreference to	
	fennel, saffron, clove	
	and black pepper.	
	 Beverages: Tea, Coffee (morphology, processing & uses) 	43-51
	7. Sources of oils and fats:	
	General description,	
	classification, extraction, their	l Intern
	uses and health implications	53-55
20	groundnut, coconut, linseed,	
	soybean, mustard and coconut	
	(Botanical name, family &	
	uses). Essential Oils: General	
	account, extraction methods,	
	comparison with fatty oils &	
	their uses.	Ď.
	 Natural Rubber: Para-rubber: tapping, processing and uses. 	56
	 Drug-yielding plants: Therapeutic and habit-forming drugs with special reference to Cinchona, Digitalis 	57
	and Cannabis; Tobacco (Morphology, processing, uses and health hazards).	
	 Timber plants: General account with special reference to teak and pine. 	58-59
	 Fibers: Classification based on the origin of fibers; Cotton and Jute (morphology, extraction and uses) 	60

DC 7: PAPER 14:	I. Cereals: Wheat (habit 1-10 sketch, L. S/T.S. grain,	S.S
Practical	starch grains, micro- chemical tests: Qualitative: Ca, Mg, Fe and S); Rice (habit sketch, study of	
	paddy and grain, starch grains, micro-chemical tests).	
	Legumes: Soybean, Groundnut, (habit, fruit, seed structure, micro- chemical tests: : Qualitative: Ca, Mg, Fe and	
	S). 3. Sources of sugars and starches: Sugarcane (habit sketch; cane juice- micro-	
	chemical tests: Qualitative: Ca, Mg, Fe and S), Potato (habit sketch, tuber morphology, T.S. tuber to	
	show localization of starch grains, w.m. starch grains).	
	Spices: Black pepper, Fennel and Clove (habit and sections).	
	 Beverages: Tea (plant specimen, tea leaves), Coffee (plant specimen, beans). 	
	6. Sources of oils and fats: Coconut- T.S. nut, Mustard-plant specimen, seeds; tests for fats in crushed seeds.	
	7. Essential oil-yielding plants: Habit sketch of Rosa, Vetiveria, Santalum and Eucalyptus (specimens/photographs).	
	Drug-yielding plants: Specimens of Digitalis, Papaver and Cannabis.	
	9. Woods: Tectona, Pinus: Specimen, (Types of section of wood specimen) 10. The section of wood specimen)	
	10. Fiber-yielding plants: Cotton (specimen, whole mount of seed to show lint	
	and fuzz; whole mount of fiber and test for cellulose),	

Jute (specimen, transverse section of stem, test for
lignin on transverse section
of stem and fiber).

Ŧ.

Discipline Core (DC)

YEAR 2: SEMESTER IV

DC 8: PAPER 15: Cell biology and Plant Breeding (Theory)	Cell biology	The cell: Cell as a unit of structure and function; Characteristics of prokaryotic and eukaryotic cells; Origin of eukaryotic cell (Endosymbiotic theory). Cell wall and plasma	1-8	S.S
		membrane: Chemistry, structure and function of Plant cell wall. Overview of membrane function; fluid, mosaic model; Chemical composition of membranes; Membrane transport – Passive, active and	9-17	
		facilitated transport, endocytosis and exocytosis. 3. Cell organelles: Nucleus: Structure-nuclear envelope, nuclear pore complex, nuclear lamina, molecular organization of chromatin; nucleolus.	18-27	
		Chloroplast, mitochondria and peroxisomes: Structural organization; Function; Semiautonomous nature of mitochondria and chloroplast.	28-36	
		 Cytoskeleton: Role and structure of microtubules, microfilaments and intermediary filament. 	37-40	
		 Endomembrane system: Endoplasmic Reticulum – Structure, targeting and insertion of proteins in the 	41-45	
		ER, protein folding, processing; Smooth ER and lipid synthesis, export of proteins and lipids; Golgi Apparatus – organization, protein glycosylation, protein sorting and export		

		from Golgi Apparatus; Lysosomes. Cell division: Phases of eukaryotic cell cycle, mitosis and meiosis; Regulation of cell cycle- checkpoints, role, of protein kinases	46-50	
	Plant Breeding	Concept of plant breeding; Significance and role in crop improvement. Types of variety selection mass selection, pure line selection, clonal selection, bulk and pedigreeselection and hybridization. Heterosis and Hybrid vigour; Male sterility in plants- types and application.	51-53 54-57 58-60	S
DC8: PAPER 16: Practical		1. Study of plant cell structure with the help of epidermal peel mount of Onion/Rhoeo/Crinum 2. Counting the cells per unit volume with the help of haemocytometer. (Yeast/pollen grains). 3. Study of cell and its organelles with the help of electron micrographs. 4. Chromosome preparation: Pre-treatment, Fixation, Staining, Squash and Smear preparation, Preparation of permanent slides. Study of Mitotic Chromosomes. 5. Metaphase chromosome preparation of 2n number and comment on chromosome morphology of Allium cepa. 6. Determination of mitotic index in pre-fixed root tips of Allium cepa. 7. Identification from permanent slides: Mitosis — (i) normal stages, (ii) abnormal stages, early separation, late separation, multipolarity, sticky bridge,	1-10	S.5

		pollen mitosis.		
		Emasculation of flower: Demonstration		
DC 9: PAPER 17: Genetics and Biostatistics (Theory)	Genetics	1. Mendelian genetics and its extension: Mendelism: Principles of inheritance; Chromosome theory of inheritance; Autosomes and sex chromosomes; Probability and pedigree analysis; Incomplete dominance and codominance; Multiple alleles, Lethal alleles, Epistasis, Pleiotropy, Recessive and Dominant traits.	1-7	S.S
		2. Linkage, crossing over and chromosome mapping: Linkage and crossing over- Cytological basis of crossing over; Recombination frequency, two factor and three factor crosses; Interference and coincidence; Numericals based on gene mapping; Sex Linkage.	8-17	
		 Extrachromosomal Inheritance: Basic concepts with examples in chloroplast and mitochondria 	18-23	
		4. Variation in chromosome number and structure: Deletion, Duplication, Inversion, Translocation,	24-31	
		 Position effect, Euploidy and Aneuploidy Gene mutations: Types of 	32-33	
		mutations; Molecular basis of Mutations; Mutagens — physical and chemical (Baseanalogs, deaminating, alkylating and intercalating agents); Detection of mutations: ClB method. Role of Transposons in mutation.DNA repair mechanisms.	34-37	
		7. Fine structure of gene: Classical vs molecular concepts of gene; Cis-Trans complementation test for functional allelism; Structure of Phage T4, rII Locus.	38-45	2

		8. Operon concept: Lac Operon and Trp- Operon 9. Population and Evolutionary Genetics: Allele frequencies, Genotype frequencies, Hardy- Weinberg Law, role of natural selection, mutation, genetic drift. Genetic variation and Speciation.	46-47 48-50	
	Biostatistics	Introduction to Biostatistics: Characteristics, Usefulness and Limitation, Types of Data. Sampling methods-concept of sampling of population, measures of central tendency and dispersal: determination of mean,	51-53 54-55	S.S
		mode, median, variance, standard deviation and standard error. 3. Rules of probability (Addition and Multiplication theorem), Null-hypothesis, Tests of significance: chi-square test, t-test (student and paired t-	56-58	
27.		test). 4. Correlation and Regression.	59-60	

DC 9: PAPER 18: Practical		1,	Introduction to chromosome preparation: Pre-treatment, Fixation, Staining, Squash and	1-10	S.S
		2.	Smearpreparation. Preparation of permanent slides Study of meiotic chromosome: Smear preparation of meiotic cells, identification of different stages and free hand drawing from flower buds; Allium cepa.		
		3.	Identification from permanent slides: Meiosis — (i) normal stages (ii) abnormal stages – laggard, anaphase bridge, ring chromosome (Rhoeo discolor)		
		4.	Mendel's laws through seed ratios. Laboratory exercises in probability and chi-square.		
		5.	Incomplete dominance and gene interaction through seed ratios (9:7, 9:6:1, 13:3, 15:1, 12:3:1, 9:3:4).		
		6.	Univariate analysis of statistical data: Statistical tables, mean mode, median, standard deviation, andstandard error (using seedling population/leaflet size).		
DC 10: PAPER 19: Reproductive Biology of Angiosperms (Theory)	Reproductive Biology of Angiosperms	1,	Introduction: History (contributions of G.B. Amici, W. Hofmeister, E. Strasburger, S.G. Nawaschin, P.Maheshwari, B.M. Johri, W.A. Jensen, J. Heslop-Harrison) and scope.	1-10	D.S
		2.		11-20	

0 =

functions, microsporogenesis, callose deposition and its significance. Microgametogenesis; Pollen wall structure, MGU (male germ unit) structure, NPC system; Palynology and scope (a brief account); Pollen wall proteins; Pollen viability, storage and germination; Abnormal features: Pseudomonads, polyads, massulae, pollinia. 4. Ovule: Structure; Types; Special structures— endothelium, obturator, aril, caruncle and hypostase; Female gametophyte— megasporogenesis (monosporic, bisporic and tetrasporic) and megagametogenesis (details of Polygonum type); Organization and ultrastructure of mature embryo sac. 5. Pollination and fertilization: Pollination types and significance; adaptations; structure of stigma and style; path of pollen tube in pistil; double	31-40
(monosporic, bisporic and tetrasporic) and megagametogenesis (details of Polygonum type); Organization and ultrastructure of mature embryo sac. 5. Pollination and fertilization: Pollination types and significance; adaptations; structure of stigma and style; path of	41-50
fertilization. 6. Self incompatibility: Basic concepts (interspecific, intraspecific, homomorphic, heteromorphic, GSI and SSI); Methods to overcome self- incompatibility: mixed pollination, bud pollination, stub pollination. Embryo, Endosperm and Seed: Structure and types; General pattern of development of dicot and monocot embryo and	51-60

	Embryo-endosperm relationship Nutrition of embryo; Unusual features; Embryo development in <i>Paeonia</i> . Seed structure, importance and dispersal mechanisms.		
DC 10: PAPER 20: Practical	1. Slides/Micrographs of Anther: Wall and its ontogeny; Tapetum (amoeboid and glandular); MMC, sporetetrads, uninucleate, bicelled and dehisced anther stages and Male Germ Unit. 2. Pollen grains: Fresh and acetolyzed showing ornamentation and aperture, psuedomonads, polyads, pollinia (slides/photograph s,fresh material), ultrastructure of pollen wall(micrograph). 3. Pollen viability: Tetrazolium test, Germination: Calculation of percentage germination in differentmedia using hanging drop method. 4. Ovule: Types-anatropous, orthotropous, amphitropous/campylotropo us, circinotropous, unitegmic, bitegmic; Tenuinucellate and crassinucellate; Special structures: Endothelium, obturator, hypostase, caruncle and aril (Permanent	1-10	D.S

Discipline Core (DC)

YEAR 3: SEMESTER V

PAPER 21: Physiology (Theory)	Water Potential and its components, water absorption by roots, aquaporins, pathway of water movement, symplast, apoplast, transmembrane pathways, root pressure, guttation. Ascent of sap— cohesion-tension theory. Transpiration and factors affecting transpiration, antitranspirants, mechanism of stomatal movement. Soil-Plant-Atmosphere continuum concept, Cavitation and ambolism. 2. Mineral nutrition:	9-18	D.S.
-------------------------------	---	------	------

3. Translocation in the phloem: Experimental evidence in support of phloem as the site of sugar translocation. Pressure-Flow Model; Phloem loading and unloading; Source-sink relationship. 4. Transpiration:	19-26
Stomata - micellation of guard cell; Role of CO2, K+ - ion, blue light & abscisic acid in stomatal movement; Anti-transpirant. 5. Plant growth	27-33
regulators: Discovery, chemical nature (basic structure), bioassay and physiological roles of Auxin, Gibberellins, Cytokinin, Abscisic acid, Ethylene, Brassinosteroids and Jasmonic acid. 6. Physiology of	34-41
flowering: Photoperiodism, flowering stimulus, florigen concept, vernalization, seed dormancy; Phytochrome, crytochromes and phototropins: Discovery, chemical nature, role in photomorphogenesis, low energy responses (LER) and high irradiance responses (HIR), mode of action.	42-54

	 Seed Dormancy: Types, causes and methods of breaking seed dormancy. 	55-60	
DC 11			
DC-11: PAPER 22: Practical	Determination of stomatal frequency and rate of transpiration per stomata per hour. Calculation of stomatal index and stomatal frequency from the two surfaces of leaves of a mesophyteand xerophyte. Measurement of oxygen uptake	1-10	D.S
	by respiring tissue (per gram / hr.) by germinating seeds. 4. Measurement of osmotic pressure in the leaf cells of Rhoeo discolor by plasmolytic method. 5. Determination of water potential / Osmotic pressure of given tissue (potato tuber) by weight method. 6. Determination of R.Q. of germinating seeds by Ganong' respirometer or respiroscope. 7. Effect of detergent (SDS) on the permeability of plasma		

. 0

	 To study the effect of different concentrations of IAA on Avena coleoptile elongation (IAA Bioassay). 	
DC 12: PAPER 23: Plant Metabolism (Theory)	in plants: Introduction, anabolic and catabolic pathways, regulation of metabolism, role of regulatory enzymes (allosteric, covalent modulation and Isozymes).	18-24 25-30

pathway, oxidative decarboxylation of pyruvate, regulation of PDH, NADH shuttle; TCA cycle, amphibolic role, anaplerotic reactions, regulation of the cycle, mitochondrial electron transport, oxidative phosphorylation, cyanide-resistant	
respiration, factors affecting respiration. 5. ATP-Synthesis: Mechanism of ATP synthesis, substrate level phosphorylation, chemiosmotic mechanism (oxidative	31-40
and photophosphorylation), ATP synthase, Boyers conformational model, Racker's experiment, Jagendorf's experiment; role of uncouplers.	41-47
6. Lipid metabolism: Synthesis and breakdown of triglycerides, β-oxidation, glyoxylate cycle, gluconeogenesis and its role in mobilisation of lipids during seed germination, α oxidation.	
7. Nitrogen metabolism: Nitrate assimilation, biological nitrogen fixation (examples of legumes and non- legumes); Physiology and biochemistry of nitrogen fixation;	48-55

	8. Mechanisms of signal transduction: Receptor-ligand 59-60 interactions; Second messenger concept, Calcium calmodulin, MAP kinase cascade.)
DC 12: PAPER 24: Practical	1. Chemical separation of photosynthetic pigments by paper chromatography. 2. Experimental demonstration of Hill's reaction. 3. Demonstration of absorption spectrum of photosynthetic pigments. 4. To study the effect of light quality on the rate of photosynthesis. 5. Effect of carbon dioxide on the rate of photosynthesis. (varying HCO- 3 concentration usingbicarbonate in an aquatic plant to find out the optimum and toxic concentration) 6. To compare the rate of respiration in different parts of a plant (Flower, leaf, buds etc) 7. Determination of R.Q. of germinating seeds by Ganong' respirometer or respiroscope. 8. To study the activity of lipases in germinating oilseeds and demonstrate mobilization of lipids duringgermination.	D.S

YEAR 3: SEMESTER VI

DC 13: PAPER	Biochemistry	1. Biomolecules:	1-10	P.D
25:		Types and significance		
Biomolecules		of chemical bonds	1	
Biochemistry)		(Covalent, non-		
Theory)		covalent & hydrogen		
		bonds, van der Waals		
		interactions); Structure		
		and properties of		
		water; pH and buffers.		
		2. Carbohydrates:	11-18	
		Nomenclature and	11-10	
		classification;		
		Monosaccharides :		
		Disaccharides;		
		Oligosaccharides and		
		polysaccharides.		4
		3. Lipids: Definition		
		and major classes of	19-26	
		storage and structural		
		lipids; Fatty acids		
		structure and		
		functions; Essential		Y
	10	fatty acids; saturated		
		and unsaturated fatty		
		acids; Triacyl glycerols		
		structure, functions		
		and properties;		
		Phosphoglycerides.		
		4. Proteins: Structure		
		of amino acids and	27-32	
		classification; Levels		
		of protein structure-		Ш
		하기 있는데 기계하고 하면 하시면 하지 않는데 모든 하게 되면 지막하다 보다.		
		primary, secondary, tertiary and		- 1
		quarternary; Protein		
	0 .	denaturation and biological roles of		
		proteins.		
			141	
		Structure of	33-41	
		nitrogenous bases;		

7. Enzymes: Definition, Structure of enzyme: holoenzyme, apoenzyme, cofactors, coenzymes and prosthetic group; Classification of enzymes; Features of active site, substrate specificity, mechanism of action(activation energy, lock and key hypothesis, induced - fit theroy), Michaelis – Menten equation, enzyme inhibition and factors affecting enzyme activity.	49-60	
Detection of nature of carbohydrate- glucose, fructose and starch from laboratory samples. Estimation of aminonitrogen in an amino acid (glycine) by formol titration method. Estimation of glucose by	1-10	P.D
	enzyme: holoenzyme, apoenzyme, cofactors, coenzymes and prosthetic group; Classification of enzymes; Features of active site, substrate specificity, mechanism of action(activation energy, lock and key hypothesis, induced - fit theroy), Michaelis – Menten equation, enzyme inhibition and factors affecting enzyme activity. 1. Detection of nature of carbohydrate-glucose, fructose and starch from laboratory samples. 2. Estimation of amino- nitrogen in an amino acid (glycine) by formol titration method.	Definition, Structure of enzyme: holoenzyme, apoenzyme, cofactors, coenzymes and prosthetic group; Classification of enzymes; Features of active site, substrate specificity, mechanism of action(activation energy, lock and key hypothesis, induced - fit theroy), Michaelis – Menten equation, enzyme inhibition and factors affecting enzyme activity. 1. Detection of nature of carbohydrate- glucose, fructose and starch from laboratory samples. 2. Estimation of amino- nitrogen in an amino acid (glycine) by formol titration method. 3. Estimation of glucose by Benedict's quantitative reagent.

		6.	acidity from lemon. Estimation of catalase activity in plant samples. Estimation of urease activity in plant samples. Colorimetric estimation of protein using Folin-Ciocalteu phenol reagent.		
DC 14: PAPER 27: Plant Biotechnology (Theory)	Plant Biotechnology		Plant Tissue Culture Historical perspective; Totipotency; Organogenesis; Embryogenesis (somatic and zygotic); Composition of tissue culture media; Nutrient and hormone requirements (role of vitamins and hormones). Micropropagation: methods and stages, advantages, disadvantages and application, organogenesis and embryogenesis (zygotic and somatic, induction of somatic embryogenesis, role of plant growth regulators, application — synthetic seeds); callus culture; application of plant tissue culture in agriculture and forestry. Protoplast isolation, culture and fusion:	11-18	P.D

Tri 1	
Tissue culture applications (micropropagation, secondary metabolite production, haploids, triploids and hybrids; Cryopreservation; Germplasm Conservation). 4. Recombinant DNA technology: Restriction Endonucleases (History, Types I-IV, biological role and application); Restriction Mapping (Linear and Circular); Cloning Vectors: Prokaryotic (pUC 18 and pUC19, pBR322, Ti plasmid, BAC); Lambda phage, M13 phagemid, Cosmid, Shuttle vector; Eukaryotic Vectors (YAC). 5. Gene Cloning: Recombinant DNA, Bacterial Transformation and selection of recombinant clones, PCR mediatedgene cloning; Gene Construct; construction of genomic and	27-32
construction of	

genetic selection; complementation, colonyhybridizatio n; PCR 6. Methods of gene transfer: Brief idea about different methods of gene transfer, Agrobacte rium- mediated, Direct gene transfer by Electroporation, Microinjection, Microprojectile bombardment; Selection of transgenics- selectable marker and reporter genes (Luciferase, GUS, GFP). 7. Applications of Biotechnology: Pest resistant (Bt- cotton); herbicide resistant plants (RoundUp Ready soybean); Transgenic crops with improved quality traits (Golden rice); Improved horticultural varieties (Moondust carnations); Role of transgenics in bioremediation (Superbug); edible vaccines; Industrial enzymes (Aspergillase,); Gentically Engineered	complementation, colonyhybridizatio n; PCR 6. Methods of gene transfer: Brief idea about different methods of gene transfer, Agrobacte rium- mediated, Direct gene transfer by Electroporation, Microinjection, Microprojectile bombardment; Selection of transgenics- selectable marker and reporter genes (Luciferase, GUS, GFP). 7. Applications of Biotechnology: Pest resistant (Bt- cotton); herbicide resistant plants (RoundUp Ready soybean); Transgenic crops with improved quality traits (Golden rice); Improved horticultural varieties (Moondust carnations); Role of transgenics in bioremediation (Superbug); edible vaccines; Industrial enzymes (Aspergillase,); Gentically		
---	---	--	--

	Products-Human Growth Hormone; Humulin; Biosafety concerns.		
DC 14: PAPER 28: Practical	Preparation of MS medium.(Demonstration) In vitro sterilization and inoculation methods using leaf and nodal explants Study of anther, embryo and endosperm culture, micropropagation, somatic embryogenesis & artificial seeds Study of methods of gene: Agrobacterium-mediated, direct gene transfer by electroporation, microprojectile bombardment. Study of steps of genetic engineering for production of Bt cotton and Golden rice. Isolation of protoplasts	1-10	P.D
	(Demonstration)/visuals Construction of restriction map of circular and linear DNA from the data provided. Isolation of Plant DNA Gel Electrophoresis of plant Genomic DNA
